HOMEMADE B.V.

Homemade B.V. Executive Strategy Briefing

360-DEGREE MARKET INTELLIGENCE REPORT

Strategic Department • Confidential • March 26, 2026

1. Executive Vision & Competitive Edge

Executive Summary: Disrupting the Status Quo with Homemade B.V.

Homemade B.V. is poised to revolutionize the corporate food delivery landscape by leveraging a lean, chef-led approach that disrupts the traditional model of high delivery costs and slow drivers. Our platform connects "Jessicas" – passionate home chefs with hidden talents – to "Vincenzos" – expats and locals seeking authentic, affordable, and healthy home cooking.

The Disruptor's Edge

By empowering our "Jessicas" to manage their own logistics, we eliminate the #1 cost bottleneck in food tech: the delivery fleet. This strategic decision not only slashes operational costs but also enables us to offer competitive pricing while maintaining profit margins. Our business model is built on a 14% commission for standard orders and a 20% commission for our catering program, ensuring a fair revenue stream for both chefs and Homemade.

Aggressive Acquisition in Amsterdam

Our sights are set on deepening density in Amsterdam, where we've already established a solid foundation with 55 active chefs. Our goal is to become the go-to "Home Chef" platform in this vibrant city. With a seasoned team in place – Menna leading growth hacking and customer acquisition, Walid and Khaylan driving sales, Tia managing onboarding, and Oleksandr overseeing ops, dev, and finance – we're ready to execute an aggressive acquisition strategy.

Competitor Analysis: Exploiting Failures

Our competitor analysis reveals opportunities to exploit their weaknesses. By leveraging data from our database and identifying areas where they fall short, we can develop targeted growth hacks that attract Vincenzos away from the corporate giants. Our tech-stack is 100% ready; it's time to focus on tactical execution.

The Homemade Advantage

In a crowded market dominated by high-cost delivery services, Homemade B.V. stands out as the lean disruptor with a winning formula:

- Empowered home chefs (Jessicas) driving logistics and profits
- Authentic, affordable, and healthy food options for expats and locals (Vincenzos)
- Aggressive acquisition strategy in Amsterdam to establish market dominance

Join us as we reshape the corporate food delivery landscape. The time for disruption is now.

2. Competitor Vulnerabilities: The Acquisition Opportunity

Competitor Analysis

The provided data reveals numerous pain points across various categories, primarily focusing on delivery issues, customer service shortcomings, and food quality concerns for the competitors (Deliveroo.co.uk, Thuisbezorgd.nl, and UberEats.com). These can be categorized as follows:

1. **Delivery Issues**:
2. Physical assault and harassment by delivery drivers.
3. Complete failure to deliver orders.
4. Orders marked delivered but never arriving due to lack of communication from the courier.
5. **Customer Service Concerns**:
6. Dismissive support staff not investigating or providing solutions.
7. Generic responses with refusal to refund for delays.
8. Non-existent customer support and inability to communicate with staff.
9. **Food Quality Issues**:
10. Consistent arrival of cold, soggy, crushed, or missing items.

'Customer-Stealing' Tactics

Given these significant weaknesses in the competitors' service offerings, Homemade B.V. can capitalize on them through targeted marketing strategies that highlight its unique selling points:

1. "Warm Hearts, Not Just Food"

Campaign Overview: Highlighting Homemade B.V.'s commitment to quality and safety by emphasizing the positive interactions between chefs and customers (e.g., the personal touch of delivery or pickup points where chefs interact directly with their customers).

Key Messages: - "Meet your chef!" Personalize the experience through direct interaction. - "Freshly cooked with love" - Highlighting the care that goes into each meal.

Target Audience: Customers concerned about food quality and looking for personalized experiences.

2. "Trust in Our Hands"

Campaign Overview: Directly addressing the delivery issues of competitors by showcasing Homemade B.V.'s unique approach to chef-led delivery/pickup.

Key Messages: - "Your order is in trusted hands" - Emphasize that chefs deliver themselves, ensuring a personal touch and higher level of accountability. - "No more missing orders or cold food!" Highlight the efficiency and care taken with each delivery or pickup.

Target Audience: Customers frustrated with delivery issues and seeking reliability.

3. "Your Voice Matters"

Campaign Overview: Leveraging the customer service shortcomings of competitors to emphasize Homemade B.V.'s commitment to transparency, communication, and support for both chefs and customers.

Key Messages: - "We listen" - Highlight the availability of chefs and Homemade B.V.'s support team. - "Every issue resolved with care" - Emphasize a solution-focused approach to customer service.

Target Audience: Customers seeking reliable, responsive customer support.

Implementation

1. **Digital Marketing**: Social media campaigns targeting specific pain points identified in competitors' offerings. Use influencer marketing and targeted ads to reach the audience.
2. **Content Creation**: Develop engaging content (blog posts, videos) that addresses the concerns and offers Homemade B.V.'s unique solutions.

3. **Partnerships**: Partner with local businesses or organizations to amplify these messages and improve visibility.

By executing these strategies effectively, Homemade B.V. can poach customers from its competitors by offering a more personalized, efficient, and customer-centric food delivery experience in Amsterdam.

3. Reverse-Engineered UX Strategy

Competitor Analysis: Interface Friction Points

Summary of Competitors' UX Strengths and Weaknesses

COMPETITOR	PAGE TYPE	UX STRENGTHS	UX WEAKNESSES
UberEats	Homepage	Prominent CTAs, Clear categorization	Long page load time (3391ms), Unclear navigation hierarchy
Thuisbezorgd	Competitor Homepage	Clear and concise CTAs, Prominent display of benefits	Slow page load time (2907ms), Confusing navigation
UberEats	Competitor Homepage		Inadequate typography, Poorly structured navigation
Homemade Catering	Internal Catering	Clear messaging, Use of social proof	Slow page load time (2754ms), High information density
Homemade Meals	Internal Consumer	Clear and concise language, Prominent call-to-action	Overly simplistic visuals, Lack of clear indication of actions

Frictionless Checkout Blueprint for Homemade

Based on the competitor analysis, we can identify key areas to improve the checkout experience for Homemade:

1. **Simplify Navigation**:
   - Implement a more intuitive navigation menu, making it easier for users to find relevant information.

    - Reduce clutter and excessive white space to create a more streamlined interface.
2. **Optimize Page Load Time**:
    - Improve page load times by optimizing images, reducing unnecessary code, and leveraging caching techniques.
    - Provide clear loading animations and progress indicators to manage user expectations.
3. **Enhance Trust Signals**:
    - Display customer testimonials and ratings prominently to build trust with potential clients.
    - Highlight the benefits of using Homemade, such as high-quality, authentic food at affordable prices.
4. **Streamline Checkout Process**:
    - Implement a more straightforward checkout flow, reducing the number of steps required for users to complete their order.
    - Provide clear and concise messaging throughout the process, avoiding unnecessary complexity.

Missing 'Trust Signals'

Competitors have ignored or underutilized several trust signals that could be leveraged by Homemade:

1. **Customer Testimonials**: While some competitors display testimonials, they are often not prominent or easily accessible. Homemade can prioritize showcasing customer feedback to build credibility.
2. **Social Proof**: Competitors like Thuisbezorgd and Homemade Catering have successfully implemented social proof elements, such as ratings and reviews. Homemade can adopt similar strategies to increase user trust.
3. **Clear Information Architecture**: By implementing a clear and intuitive navigation menu, Homemade can make it easier for users to find relevant information and build trust in the platform.

By addressing these friction points and incorporating missing trust signals, Homemade can create a more seamless and trustworthy checkout experience, setting itself apart from competitors and driving increased customer loyalty.

4. Economic Warfare: Pricing Advantage

Competitor Pricing Comparison

COMPETITOR	AVERAGE MEAL PRICE	DELIVERY FEE AVG	PLATFORM FEE	PROMOTIONAL MECHANICS
Thuisbezorgd	12.43	3.5	1.75	10% off first order, 5% loyalty
UberEats	15.0	3.99	20.0	Free delivery over $10, 10% for students/seniors
Deliveroo	12.75	2.49	1.25	Buy one get one free on orders above 30 EUR

Homemade Pricing Model

Our platform offers two pricing models:

- **Standard Order**: 14% commission
- **Catering Program**: 20% commission

Let's compare our prices with the competitors:

COMPETITOR	AVERAGE MEAL PRICE	DELIVERY FEE AVG	PLATFORM FEE	OUR PRICES
Thuisbezorgd	12.43	3.5	1.75	Homemade (14%): $2.55, Homemade (20%): $4.10
UberEats	15.0	3.99	20.0	Homemade (14%): $3.30, Homemade (20%): $6.00
Deliveroo	12.75	2.49	1.25	Homemade (14%): $2.53, Homemade (20%): $4.15

Why Our Pricing Beats the Competition

Our "No Drivers" model allows us to offer prices 15% lower than the competition while giving chefs more profit:

- We eliminate the cost of maintaining a delivery fleet, which is typically the largest expense for food delivery platforms.
- By allowing chefs to deliver themselves or set up pickup points, we reduce the overhead costs associated with logistics and driver management.
- Our platform fee is significantly lower compared to UberEats (20.0%) and Deliveroo (14.0%), resulting in higher profit margins for our chefs.

Example Comparison

Let's take a sample order:

- Competitor: UberEats
- Average Meal Price: $15.00

- Delivery Fee Avg: $3.99
- Platform Fee: 20%
- Order Total: $19.99

With Homemade, the same order would cost: * Average Meal Price: $15.00 (same) * Delivery Fee Avg: $0.00 (no delivery fee) * Platform Fee: 14% ($2.10) or 20% ($3.00) * Order Total: $17.10 (Homemade 14%) or $18.00 (Homemade 20%)

As you can see, our pricing model offers significant benefits for both customers and chefs:

- Customers save money on delivery fees and enjoy lower prices.
- Chefs earn more profit due to reduced platform fees and increased revenue.

This is just one example of how our "No Drivers" model allows us to offer competitive pricing while giving chefs more profit. I believe this demonstrates why Homemade is poised to disrupt the corporate food delivery giants and become the go-to platform for home chefs and customers alike.

5. Amsterdam Market 'White-Space'

Based on the provided data source, I have analyzed the unmet needs of Amsterdam customers on Reddit/Forums. Here's a summary:

Top Unmet Needs:

1. **Affordable Indian food delivery options** (Urgency Level: Critical, Validation Score: 146)
2. **Food delivery services not awful in NL** (Urgency Level: Critical, Validation Score: 258) - This is a broad need, but we can infer that customers are looking for reliable and high-quality food delivery services.
3. **Easy food delivery access for high-rise residents** (Urgency Level: Important, Validation Score: 103)

Target Cuisine Segments:

Based on these needs, I recommend targeting the following cuisine segments in Amsterdam West, South, and Center:

1. **Amsterdam West:** Indian cuisine - Given the high demand for affordable Indian food delivery options, it's essential to target Indian chefs specializing in this cuisine.
2. **Amsterdam South:** International/Global cuisine (e.g., Asian, Mexican) - Building on the second unmet need ("Food delivery services not awful in NL"), targeting international chefs can help provide a fresh and exciting experience for customers.
3. **Amsterdam Center:** Local/Netherlandish cuisine with a twist - To address the third unmet need ("Easy food delivery access for high-rise residents"), consider partnering with local chefs who offer traditional Dutch cuisine with modern twists, making it appealing to both locals and expats.

These segments will help you address specific customer needs while also allowing you to showcase Homemade B.V.'s unique value proposition of connecting passionate home chefs with customers seeking authentic experiences.

Actionable Hacks:

1. Offer a limited-time discount or promotion for Indian cuisine in Amsterdam West to attract customers.
2. Create a social media campaign highlighting the convenience and variety of international/global cuisine available through Homemade B.V. in Amsterdam South.
3. Develop partnerships with local Dutch chefs in Amsterdam Center, emphasizing their unique offerings and ease of delivery for high-rise residents.

Walid & Khaylan can use these targeted segments to onboard new chefs, focusing on the specific cuisines that customers are begging for. By doing so, Homemade B.V. will be better positioned to meet customer needs, increase sales, and deepen its presence in Amsterdam.

6. Strategic Demand Calendar & Matrix

Dutch Holidays Marketing Calendar

HOLIDAY	DEMAND CATEGORY	STRATEGIC PLAY	EXPECTED IMPACT
King's Day (April 27)	Hangover Food, Late-Night Bites	Recovery Meals Marketing Campaign, 'King's Day Bundle' with premium ingredients	High - Capture large groups and families celebrating the night before
Liberation Day (May 5)	Comfort Foods, Romantic Dinners	'Liberation Day Bundle', 'Romantic Reunion' menu with champagne pairing recommendations	Medium-High - Family gatherings and romantic dinners expected to peak on this day
Ascension Day (May 14)	Cold Cuts, Gourmet Salads	Discounts on large orders (>10 people), bundle deals with premium wines or champagne	Low-Medium - Comfort food and cold cuts in demand for post-Ascension festivities
Pentecost (May 24)	Dutch Comfort Food, Hangover Recovery Meals	Highlight premium meal batch services offering large family platters and hangover recovery meals	Medium - Large family gatherings expected to peak on this day
Whit Monday (May 25)	Comfort Foods, Cold Cuts	Focus on promoting large family platters with comforting dishes	Low-Medium - Families gathering together for post-holiday celebrations

Critical Capture Windows:

- **King's Day (April 27)**: High-impact marketing campaign focusing on 'Recovery Meals' and a 'King's Day Bundle' to capture large groups and families celebrating the night before.
- **Liberation Day (May 5)**: Medium-High impact marketing campaign emphasizing the 'Liberation Day Bundle' and 'Romantic Reunion' menu to cater to family gatherings and romantic dinners.

Recommendations:

- Create targeted social media ads highlighting the benefits of Homemade's services during these holidays.
- Partner with local influencers to promote Homemade's offerings and create engaging content for each holiday.
- Offer limited-time discounts or promotions for large orders (>10 people) to capitalize on family gatherings and celebrations.
- Develop a 'Post-Feast Recovery Menu' featuring comforting dishes like stamppot, uitsmijter, and omelets for Tweede Kerstdag (St. Stephen's Day).

7. 90-Day Tactical Execution Roadmap

Here is a Task-Responsibility Matrix for the next 90 days:

PHASE	GOAL	OWNER	KEY TASK
Weeks 1-4: Awareness & Outreach	Identify and recruit 20 new chefs in Amsterdam to increase density to 50+ active chefs	Menna (Marketing)	Develop and execute a targeted social media campaign to reach home cooks in Amsterdam, leveraging Instagram ads and Facebook groups focused on food and cooking.
Weeks 1-4: Awareness & Outreach	Establish relationships with local cooking schools, culinary institutes, and food bloggers to promote Homemade B.V. as a platform for home chefs	Oleksandr (Ops/Dev/Fin)	Reach out to these organizations and offer exclusive discounts or promotions to encourage them to share the platform with their networks.
Weeks 5-8: Onboarding & Vetting	Streamline the onboarding process for new chefs, reducing time-to-launch from 3 days to 1 day	Tia (Onboarding)	Implement a simplified online application and vetting process, using existing Google Meet inductions to reduce the number of in-person meetings.
Weeks 5-8: Onboarding & Vetting	Develop a referral program for existing chefs to encourage them to invite friends	Walid/Khaylan (Sales Force)	Design an incentives system, offering rewards or discounts for successful referrals, and

PHASE	GOAL	OWNER	KEY TASK
	and colleagues to join the platform		promote it through email marketing campaigns.
Weeks 9–12: Scaling & Efficiency	Automate the commission calculation and payment process for chefs, reducing manual labor by 50%	Oleksandr (Ops/Dev/Fin)	Develop a custom integration with the existing payment system to automate commission calculations and payments, freeing up staff time for growth initiatives.
Weeks 9–12: Scaling & Efficiency	Analyze customer acquisition costs and develop a plan to optimize marketing spend on channels driving the most value	Menna (Marketing)	Use data from existing campaigns to identify top-performing channels and allocate budget accordingly, ensuring maximum ROI on marketing investments.

This Task-Responsibility Matrix focuses specifically on growing the Amsterdam base from 14 to 50+ active chefs over the next 90 days. Each task is designed to provide "Actual Gold" – high-impact, actionable hacks used for Customer Acquisition – and leverages existing data and systems to drive growth.

8. Growth Hacking: Acquisition 'Gold'

The battle has begun! As a Growth Hacker, I'll provide 5 high-impact codes to acquire customers in Amsterdam, exploiting the weaknesses of our competitors and leveraging the unique strengths of Homemade B.V.

Growth Hack #1: "Neighborhood Champions"

- Target: Expats and locals in high-density Amsterdam neighborhoods (e.g., De Pijp, Oud-Zuid, Jordaan)
- Approach:
  - Identify top-rated chefs with authentic specialties from specific neighborhoods.
  - Create a network of Neighborhood Champions – influencers who promote Homemade B.V. to their social circles.
  - Offer exclusive deals and promotions for customers in these areas, encouraging them to try local flavors.
- Why it works: By leveraging the pride of community and promoting local talent, we tap into the unique character of Amsterdam's neighborhoods.

Growth Hack #2: "Delivery Disruptor"

- Target: Customers dissatisfied with current delivery services (high costs, slow drivers)
- Approach:
  - Identify areas with high concentrations of complaints about existing food delivery services.
  - Create a series of targeted social media ads highlighting Homemade B.V.'s benefits (lower costs, chef-driven delivery).
  - Offer limited-time discounts and free trials to convert disaffected customers.

- Why it works: By targeting the pain points of our competitors' services, we offer a clear alternative that resonates with frustrated customers.

Growth Hack #3: "Vincenzo's Vibes"

- Target: Expats in Amsterdam seeking authentic, affordable home cooking
- Approach:
  - Partner with expat communities and online forums to promote Homemade B.V.
  - Create a series of social media videos showcasing chefs' stories and recipes, highlighting the authenticity and value proposition.
  - Offer exclusive promotions for expats, encouraging them to try our platform.
- Why it works: By catering to the specific needs and preferences of expats in Amsterdam, we establish trust and loyalty among this key customer segment.

Growth Hack #4: "The Chef's Secret"

- Target: Foodies and influencers in Amsterdam
- Approach:
  - Identify top-rated chefs with unique specialties and stories.
  - Create a series of social media campaigns showcasing the chefs' talents, highlighting the quality and authenticity of Homemade B.V.'s offerings.
  - Offer exclusive access to new chefs and recipes for influencers, generating buzz around the platform.
- Why it works: By partnering with influential foodies and showcasing our chefs' expertise, we create a loyal following and drive word-of-mouth marketing.

Growth Hack #5: "Fresh Fusion"

- Target: Health-conscious customers in Amsterdam
- Approach:
  - Partner with local health food stores and gyms to promote Homemade B.V.
  - Create a series of social media ads highlighting the healthy, fresh ingredients used by our chefs.
  - Offer special promotions and discounts for customers who order healthy meals, encouraging them to choose Homemade B.V. for their dietary needs.
- Why it works: By tapping into the growing demand for healthy food in Amsterdam, we attract a loyal customer segment that appreciates the quality of our offerings.

These high-impact growth hacks focus on density in Amsterdam neighborhoods, exploiting the weaknesses of competitors and leveraging the strengths of Homemade B.V.'s unique model. By implementing these tactics, we'll drive customer acquisition and establish ourselves as the default home chef platform in Amsterdam.
